Forest Management Area (FM) and Number of Chain of Custody Certificates (CoC) 2013 – 2022

Data as of July 2022.

Key Market Drivers

Reduction of risk in value chains.

High production, high consumption.

Growing recognition by the market.

Committed international buyers.

Growing potential for plantations.

Key Accounts

FSC Brasil

Brazil is one of the countries with the most incredible biodiversity and water capital on the planet, as well as a vibrant cultural diversity and diverse traditional populations, including almost 900,000 indigenous people, 305 ethnic groups, and 274 indigenous languages.

More than 50% of the Brazilian territory is covered by forests, with almost 500 million hectares being 98% native forests and 2% plantations.

The first certified area in the country dates back to 1995, but the national office became official in 2002 with the creation of the Brazilian Forest Management Council. Today, it has more than 100 members, distributed in the three chambers, who represent a solid performance in promoting the responsible management of Brazilian forests, reconciling social, environmental, and economic aspects. In addition, the country is an example of certification of timber and non-timber products and ecosystem services.
